Description

Fire industry standards require the installation of Carbon Monoxide Detectors in residential and commercial buildings, hotels, dormitories, day care centers, schools, hospitals, assisted-living facilities and nursing homes.

What is carbon monoxide? Carbon monoxide (CO) is an odorless, colorless, tasteless and highly toxic gas. CO is produced from devices such as heating systems and power tools that fail to function correctly or are not properly vented.

Why should I test CO detectors? CO detectors protect lives by sampling the air and measuring the amount of CO present over a time period. If a dangerous level of CO is detected the detector will enter into alarm.

Features

- Genuine and non-flammable CO gas
- Fast test and re-set time
- Controllable
- Safe
- Detector manufacturer endorsed
- Designed for use with system-monitored CO detectors
- UL classified
